StockLite Inventory API Reference

Authentication

Every request carries the key in the X-Api-Key header; keys are issued per environment and are never sent in the query string. The base URL for production is https://api.stocklite.example/v1.

Rate limits

An API key may issue 100 requests per minute. A request that exceeds the limit is answered with HTTP 429 and a Retry-After header of 30 seconds.

GET /items

Returns the items in a warehouse, one page at a time.

Name	Type	Required	Default	Description
warehouse_id	string	yes	-	Identifier of the warehouse to read
limit	integer	no	50	Number of items per page, maximum 200
cursor	string	no	-	Opaque token from the previous response
updated_since	date	no	-	ISO 8601 date, filters items changed after it

The response is application/json and the page envelope carries data, next_cursor, and has_more.

POST /items

Creates an item. The body is JSON and the only mandatory field is sku.

Name	Type	Required	Default	Description
sku	string	yes	-	Stock keeping unit, unique per warehouse
name	string	yes	-	Human readable label shown in reports
quantity	integer	no	0	On-hand count at the time of creation
unit_price	number	no	0.00	Price in the warehouse currency, two decimals
tags	array	no	empty list	Searchable labels attached to the item

A duplicate sku is answered with HTTP 409 and the error code sku_already_exists.

DELETE /items/{sku}

Removes an item that has never been part of a movement. An item with history returns HTTP 409 with the error code item_has_movements and must be archived instead.

Webhooks

Set the callback URL in the console. StockLite posts item.updated whenever quantity changes, and signs the body with HMAC SHA-256 in the X-StockLite-Signature header.

Delivery is retried 5 times with exponential backoff and then marked failed.

Error codes

Code	Meaning	Action
400	bad_request	Fix the JSON body; the message names the offending field
401	unauthorized	The key is missing or revoked, issue a new one in the console
404	not_found	The sku or warehouse does not exist in this environment
409	conflict	The resource already exists or cannot be deleted
429	rate_limited	Back off for the number of seconds in Retry-After
500	internal_error	Safe to retry once; StockLite pages on-call above a one minute rate

Versioning

The major version is in the path and never changes without twelve months of notice. Minor additions are additive and are announced in the changelog.

The sandbox environment is https://sandbox.stocklite.example/v1 and holds 90 days of data.

Pagination uses a cursor rather than an offset, and the last page has has_more set to false.
